

# Creating chat-bot with Dialogflow

Dialogflow console: <https://dialogflow.cloud.google.com/>

You should create an agent using this tutorial: <https://cloud.google.com/dialogflow/docs/tutorials/build-an-agent/> (except for “Create fulfillment using webhook” - it is optional).

An agent should be different from the one which is described in the tutorial.

As a result you should send screenshots (or it can be screencasts as well) which show different abilities (examples of interacting with user, answers on the user’s questions, **in demo console**) of your chat-bot.

Enjoy :)
